# Case Study
Delivery Service

CASE STUDY N°2
Delivery Service

DELIVERY ROUTE

Delivery service companies have a long list of clients who are scattered in a wide area, and therefore, they have to draw out the most money-saving delivery itinerary possible.

GEODATINDUSTRY PROPOSAL

In the Geodatindustry's Database, a delivery service company would find the physical adresses and x,y coordinates of their clients. With that kind of intel, it would be easier to optimise delivery routes that would save time and money.
